Processing advices for decoration with ETTLIN *lux*[®] 1324 MagicFabric

- Cut off pieces of fabric with a length of 40-50 cm, according to the planned diameter of the decoration element. It is important to use always the full width of the fabric because the effect and formability are best in this direction.

- In order to cut the MagicFabric use either a pair of scissors or heat or ultrasonic cutting devices.
- Put the LED-chain onto the piece of fabric.

- Fold the fabric with the LED-chain inside to create a tube. The two edges of the tube should overlap to build a seam. This seam will be used for fixing. Therefore it should be approx. 10 centimetres wide to avoid frizzling of the fabric edges.

Processing advices for decoration with ETTLIN *lux*[®] 1324 MagicFabric

- Fix the seam of the tube. Possibilities of fixing are:
 - tacking threads

- threads (e.g. nylon) to do little knots or to loop around the overlapping fabric

- hot glue

- Close beginning and end of the tube with the same fixing methods.
- You can now drape the tube in any wished shape.
- If you need tubes that are longer than 2 meters (the fabric width), you can either use several individual tubes, or you can connect several pieces of fabric, using the same fixation methods, that are mentioned above.
- You can also use these fixation methods to stabilize the finished drape of the decoration tube.
